

IN THE CLAIMS:

Please amend Claims 58 to 63 and add new Claims 64 and 65, as follows.

Claims 1 to 57 (Cancelled).

58. (Currently Amended) A recording device for recording at least one of image data and voice data on a detachable recording medium comprising:

selection means for selecting a generation condition of image data or voice data;

generating means for generating image data or voice data in accordance with the generation condition selected by said selection means;

retrieving means for retrieving instruction information pre-recorded in the detachable recording medium for determining a file name;

file name determining means for determining a file name by combining a character, selected in accordance with the generation condition selected by said selection means, and a serial number, in accordance with the instruction information retrieved from the detachable recording medium; and

recording means for recording, on the detachable recording medium, a file including the image data or voice data generated by said generating means using the file name determined by said file name determining means.

59. (Currently Amended) A recording device according to Claim 58, wherein the instruction information pre-recorded on the detachable recording medium is instruction information for determining a plurality of characters to be used for a file name.

60. (Currently Amended) A method for recording at least one of image data and voice data on a detachable recording medium comprising:

selecting a generation condition of image data or voice data;

generating image data or voice data in accordance with the generation condition selected in said selecting step;

retrieving instruction information pre-recorded in the detachable recording medium for determining a file name;

determining a file name by combining a character, selected in accordance with the generation condition selected in said selecting step, and a serial number, in accordance with the instruction information retrieved from the detachable recording medium; and

recording, on the detachable recording medium, a file including the image data or voice data generated in said generating step using the file name determined in said file name determining step.

61. (Currently Amended) A recording method according to Claim 60, wherein the instruction information pre-recorded on the detachable recording medium is instruction information for determining a plurality of characters to be used for a file name.

62. (Currently Amended) A recording device according to Claim 58, wherein said file name determining means determines a file name in accordance with a recording condition of the image data or voice data generated by said generating means and the pre-recorded instruction information retrieved by said retrieving means.

63. (Currently Amended) A method according to Claim 60, wherein said file name determining step includes determining a file name in accordance with a recording condition of the image data or voice data generated in said generating step and pre-recorded instruction information retrieved in said retrieving step.

64. (New) A recording apparatus for recording at least one of image data and voice data on a detachable recording medium comprising:

a selector that selects a generation condition of image data or voice data;

a data generator that generates image data or voice data in accordance with the generation condition selected by said selector;

a reproducing device that reproduces instruction information pre-recorded in the detachable recording medium for determining a file name;

a data processor that determines a file name by combining a character, selected in accordance with the generation condition selected by said selector, and a serial number, in accordance with the instruction information reproduced from the detachable recording medium; and

a recording device that records, on the detachable recording medium, a file including the image data or voice data generated by said data generator using the file name determined by said data processor.

65. (New) A computer readable medium having stored therein an executable program for recording at least one of image data and voice data on a detachable recording medium, the program performing a method comprising the steps of:

selecting a generation condition of image data or voice data;

generating image data or voice data in accordance with the generation condition selected in said selecting step;

retrieving instruction information pre-recorded in the detachable recording medium for determining a file name;

determining a file name by combining a character, selected in accordance with the generation condition selected in said selecting step, and a serial number, in accordance with the pre-recorded instruction information, and

recording, on the detachable recording medium, a file including the image data or voice data generated in said generating step using the file name determined in said file name determining step.
